				Vote:	Approve, Disapprove, Abstain		
NB (ISO 3166)	No.	Category	Clause, Sub- clause	Paragraph, Figure, Table	Comment and rationale	Pro pos ed new text	
							WG 14 response
DK	1	E	Title		you cannot have a part of a part in ISO.		Will be corrected in the next draft
DK	2	E	Foreword		Development committee is not JTC1/SC22/WG14 but JTC1/SC22, WG14 is not a subcommittee.		Will be corrected in the next draft
DK	3	GT			all functions in the C standard need to have corresponding reentrant functions without global variables, eg the locale functions.		This is out of scope for Part 1, but will be considered for an additional Part of this TS or revision of the C standard.
DK	4	GT			the TS should specify how the programming languages could make use of the specs in the TS.		This is out of scope for the TS. However, some other committees such as Fortran have specifications for binding to C. We have no objection to having them augment that binding.
DK	5	TL	Bibliography		please also refer to ISO/IEC TR 30112 for internationalization, or possibly forthcoming ISO/IEC 30112 - which is also expected to address reentrant C functions for i18n.		This is out of scope for Part 1, but should be considered for an additional Part or revision as mentioned in the response to comment 3.
